*Scoring:* Item responses on the **Cage** are scored 0 for “no” and 1 for “yes” answers, with a higher score an indication of alcohol problems. A total score of 2 or greater is considered clinically significant.

While the normal cut-off for the **Cage** is 2 positive answers, the consensus panel of the substance abuse and mental health services administration recommends that primary care physicians lower the threshold to one positive answer to cast a wider net and identify more patients who may have substance abuse disorders.
